

Agony

Party Rental Operators:
You **can** do more than is
humanly possible
with a PRS Flatwork
Ironer

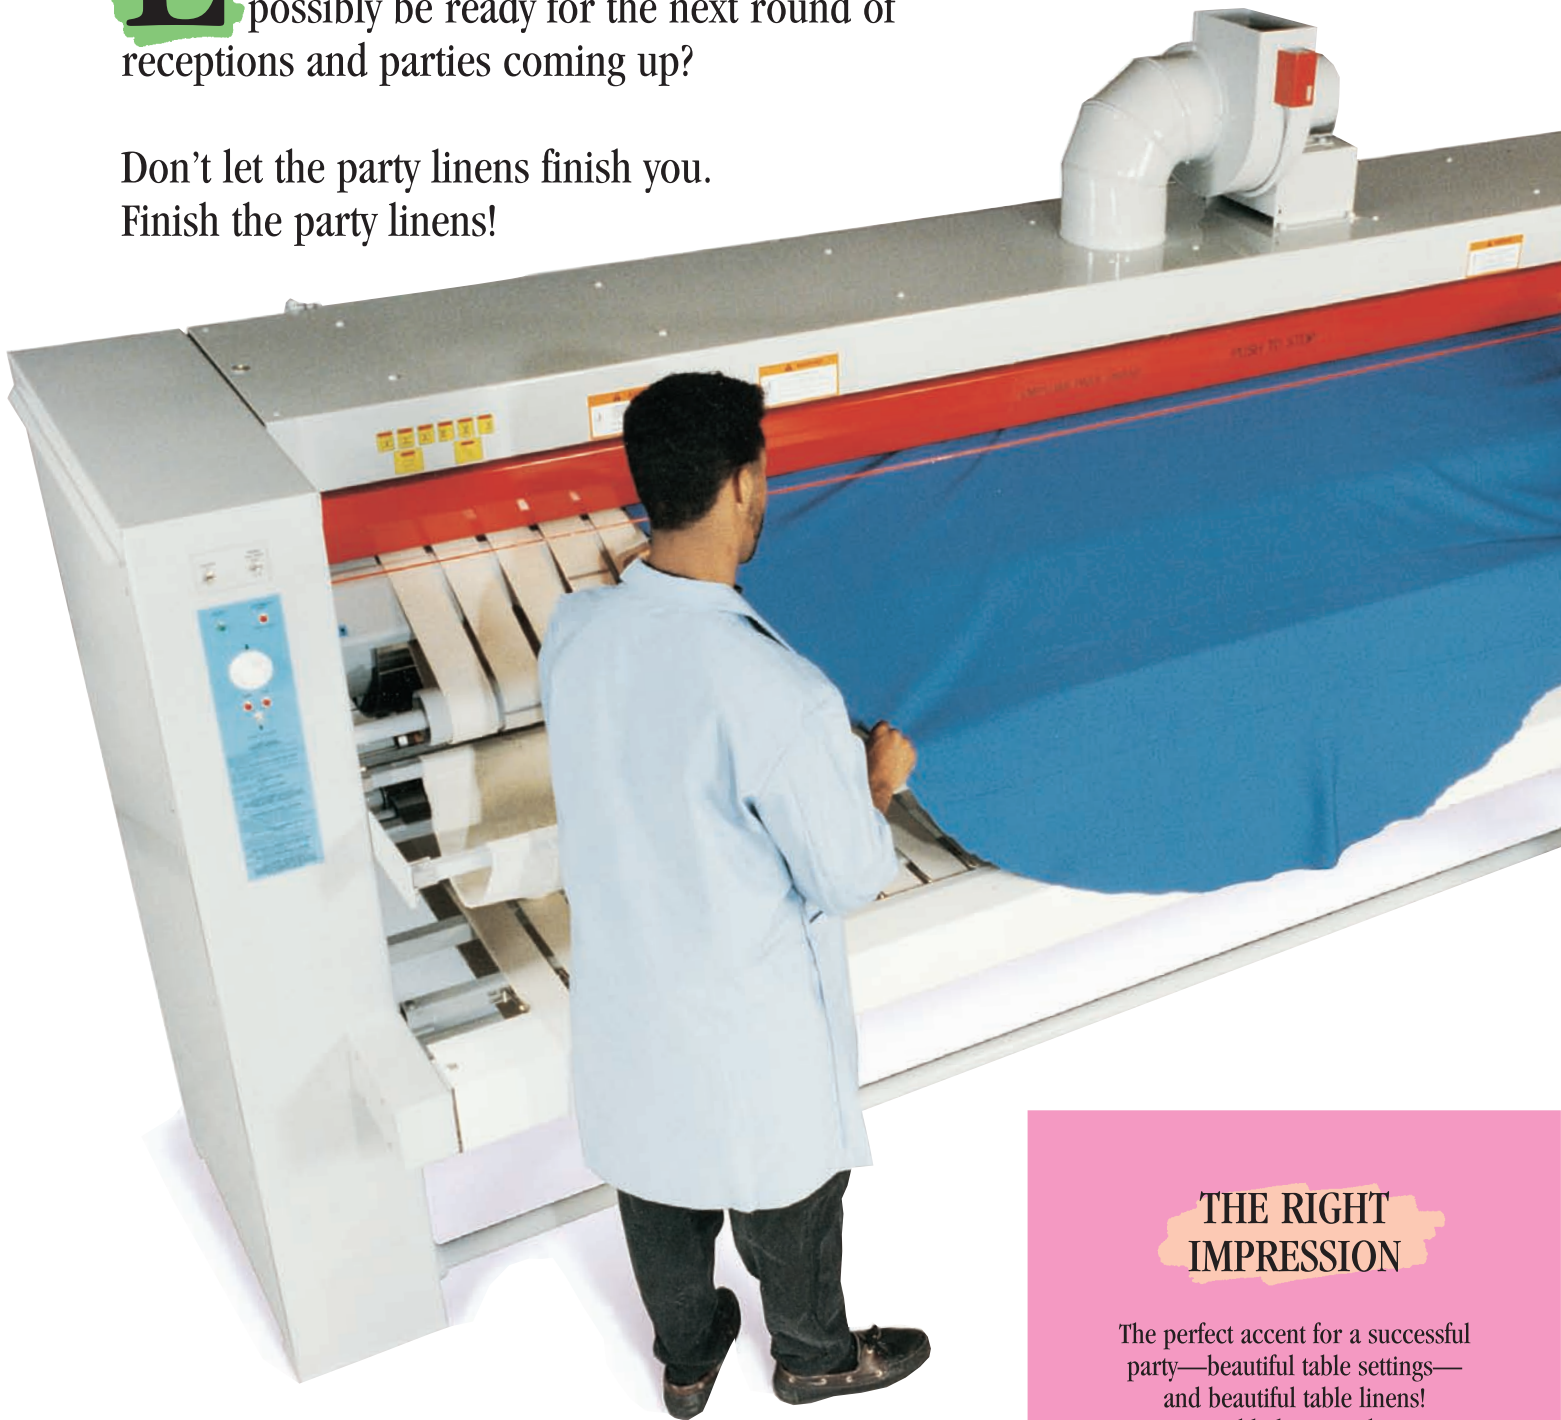

Ecstasy

PRS (Party Rental Speed)

Ever been buried under a pile of returned table linens and wondered how they could possibly be ready for the next round of receptions and parties coming up?

Don't let the party linens finish you.
Finish the party linens!

The PRS Ironer comes standard with the Intelatrol Safety / Energy Saving device; Emergency Stop Bar and Pull Cord; a Temperature and Speed Control; full vented canopy; and rear return optional!

THE RIGHT IMPRESSION

The perfect accent for a successful party—beautiful table settings—and beautiful table linens! Attractive table linens enhance any table setting, contributing to the overall success of every party—to the great satisfaction of every host and hostess

cial) Flatwork Ironers

With the flatwork ironer developed specifically for the party rental industry, those linens can be quickly, easily and economically processed—*in-house*. If necessary, table linens can be turned around in as little as a couple of hours. You don't have to be dependent on outside services or on temporary crews trying to iron more table linens by hand than is humanly possible.

The easy-to-operate PRS flatwork ironers are specifically designed to process—without folding—even those “party size” (126” and 132”) square and round table linens so popular in the industry. And, the finishing quality is superior to anything that can be achieved by hand!

PRS flatwork ironers have either a 132” or 136” wide dimension special finishing roll capable of ironing even the largest cloths without folding. This means superior finished quality, better appearance, faster production and considerably longer linen life as a result of eliminating the wear along the fold.

Because you can do more, and do it better with fewer people, it also means a *significant reduction in processing costs*. Users in the party rental industry report that the full cost of the machine is returned through labor cost savings in six months or less.

With a PRS flatwork ironer, your linen inventory is always ready for another party. And you can send it to the party with a rich, smooth, ironed look that you—and your customer—can be proud of!

STOPPING ON THE CURVES

In addition to the extra wide ironing surface, PRS ironers have another unique and important feature: a foot operated, temporary stop device (optional).

Large cloths, especially the round ones, occasionally need adjustment and smoothing as they are being fed into the ironer. To do this with complete safety, either operator can stop the forward motion of the machine and momentarily turn off the heat simply by stepping on a pedal that stretches across the entire width of the unit. Needed adjustments can be quickly made to the material. With removal of the foot pressure, the machine resumes operation and the heat to the finishing surface is back on.

MACHINE SELECTION

The exclusive “PRS” features are available on a number of leading CMV Sharper Finish ironers:

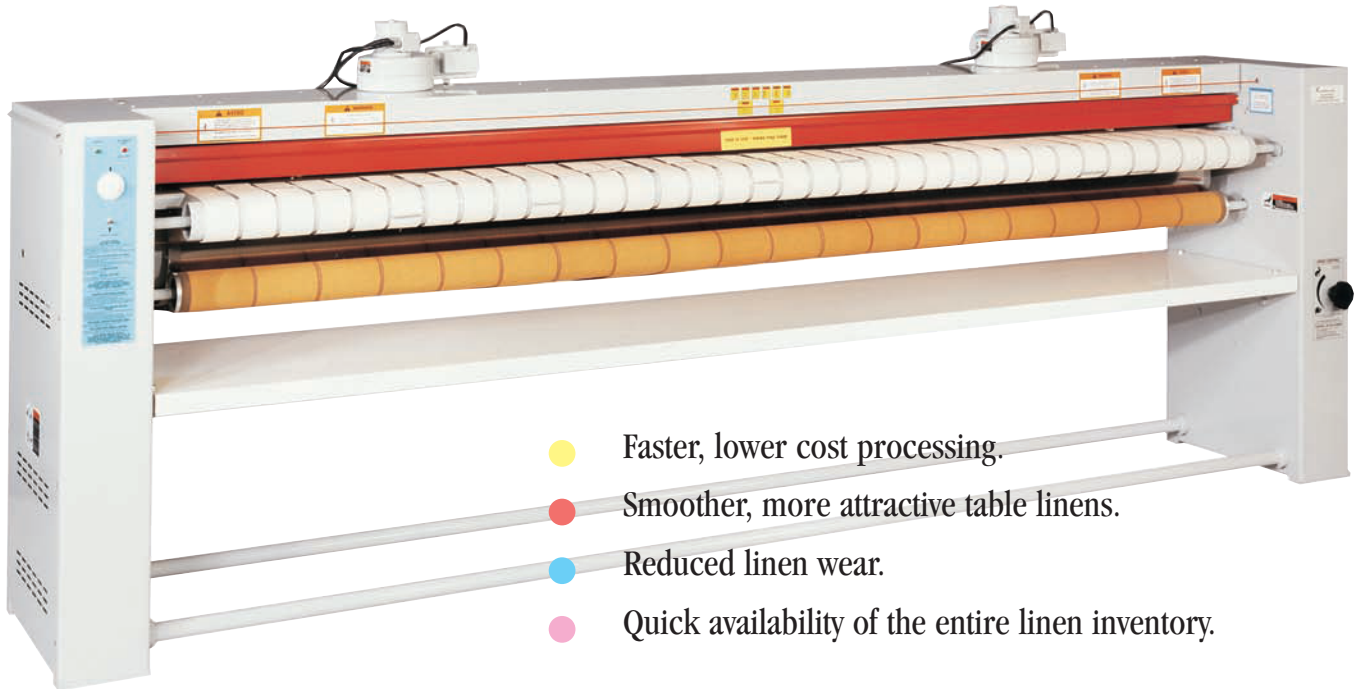

PRS MODELS 1200, 1600, 2000, & 2400

Besides 132” / (3353mm) or 136” / (3454mm) ironing surfaces, the PRS comes standard with the Intelatrol II advanced energy and safety devise; Momentary stopping pedal (not on inverter drive models); Auxiliary feeding basket. Other standard features include full exhaust canopy including blower, emergency stop bar, emergency pull cord, temperature controlled, speed control, and more. The PRS Models can be ordered either front feed with front return only OR front feed with front or rear return (CMV recommends rear return when possible).

The Winner

Considering these important benefits:

- Faster, lower cost processing.
- Smoother, more attractive table linens.
- Reduced linen wear.
- Quick availability of the entire linen inventory.

A PRS flatwork ironer can make you the winner—at the finish line!

SPECIFICATIONS

FINISHING SURFACE WIDTH. 132" / 136"
